IT'S WHAT MAKES OUR RADIOLOGY SERVICE SO EXCEPTIONAL

EXCEPTIONAL EQUINE RADIOLOGY

Giving you diagnostic imaging confidence

Clinical Support Services

We understand equine practice is often tough, stressful and demanding. Our exceptional team of specialist equine radiologists can change that. With their extensive, diverse clinical experience and their remarkable attention to detail, their written reports will give you the diagnostic confidence you need to make the best recommendations for your patients.

- CT, X-ray, MRI and Scintigraphy studies.
- Standard reports within one working day.
- 2 working days reporting for PPEs. Based on TWO specialist opinions. Their comments and conclusions will relate to the intended use of the horse. This report can be attached as an addendum to your PPE certificate for legal security and to patient records for clinical reassurance.
- Our team has a wealth of experience with high value and contentious cases. We are able to provide help and support at these stressful times.

WHAT MAKES US DIFFERENT?

Our team of international diagnostic imaging specialists have extensive experience across a wide range of equestrian sports. Our reports include accurate descriptions, annotations, clinical comments and conclusions relevant to the type of work the horse does. One of our unique features is the ability for referring veterinarians to message and interact with the reporting radiologist to get the most out of their report.
